Thesis Title : Granite

Date: 04. 03. 2013

## Granite

It was a preliminary time in the earth when land was forming under tectonic movement . The plate called 'Euro-Asia ' was activated till the date of late 19th century . It was told that, once, a huge merchant ship from the middle east was smoothly maintaining 'spice route ' on its way to south-east asia. Merchants used to carry birds, camel , horse , turtle in the ship to spread spices around the world on market demand , other wise , advanced sensory system in animals was always been help full on a journey. The Albertross [migratory bird] was continuously showing the path flying round the ship in the order to magnetic pole. Suddenly end of one evening , at a point the Albertross flew away , the compass failed to work, the captain had no idea what happening , the ship turned sharply in different directions and it was morning! A ship, motionless, in the empty desert- every one is spell bound . only the turtle who run away landed himself in barren landscape and spread through out local flora & fauna .

Geographical location that, once was part of ancient civilization- many historical & geographical features has been taken place, that eventually has a potential to evokes aspects of landscape & geo- politics in present time . Initially, it would be heard to pin point any such particular discipline to narrate complexity and ambiguity of a space that has already gone through different phases. Sake of the narration, there will be a need of combination fact & fantasy, which try to reflects on its materiality. A \*ontologically discourse on event. The aim of the text is to established knowledge as indispensable tool to a nation, and how knowledge meant to be in traditional history and modern history>>> where political interest become crucial to embedded & channelize them. Government strategies, made on a area in term of build up a society & its norms, by applying structural division such, administration, education, health, security. The fictional character siri, who just came to the place to join as an archeologist of a local archeology museum- presently the space is belongs to border of India - Pakistan, the region called sindh, has maintaining exclusive cultural landscape due to natural & political turmoil- Through out the narrative sequences, it will open up various structural aspect of a nation, its natural resources, wealth distribution in the society, state controlling power on local law & order, border control policies, different layers of securities system etc. So far, what we have understood image of nation in the reflection from primitive-traditional society to colonial - post colonial society. The Place originally is located on the western corner of south Asia, bordering the Iranian Plateau in the west, part of a old gondwana land . Geographical locations gets blur with full of mummeries, information- from different places, in different times. Baluchistan, Afghanistan, Pakistan- what is before, what is after, total displacement of time & place ' in mentally & physically. Adopting an archeologist role, will give easy access through the places to collect nuances from different events that is combination, will produced a pictures of state in collective. It is a key institute, which has been activated our landscape majorly, it is a gate way, we entered into past via museum & its sites. The Museum culture is highly represent glorious past go a country , eventually become significant role in global ethnic culture. On the other hand, new Discovery - invention in various field become a important resources to a nation. Juxtaposition of different institution in a specific geographical location and how they are maintaining there activities, events, ideologies to make the time. A individual living in a collective society, when other in-animates objects like, river, mountain, bridge are incorporating in this structure as well. The approach here are not only implementing & discuss structural aspect of society, but also established other invisible energy links which is operating. It is about a speculative different realism beyond its available sign and symbol. Continuously, we talked about real, realism , actualization, to go as closer as to the reality, but what does we will gain to achieve real ?

It was in the mid-after noon when he wakes up, the train was still running since last day, when he has last bored the train station from Virenda in deep south, now train has reached far away more to extreme- North - Western side. Traveling on road way is slow transformation. Crossing through so many junctions, small stations, so many bridge, river, forest- very 5 kilometer landscape get changed here, that does not happened traveling in air. The character name is Sirinwasan (siri), who is traveling to yards to west, place call kutch to join as archeologist in local Archeological museum. The post was empty since last one and half years, no now really wants to go there in the middle of the no where, salted- barren landscape. Sri took it, to know what a exciting moment he going to have in next 6 years. Salvation comes after punishment, there is very thine line in between. He was thinking & half laying down on the train berth, allowing oppositional force to lay him down. Rest of 24 hour he hasn't spoken much with his other passengers around him. Although ear was in the air! One of them working in radio station, but not in radio station actually, it is army radio station, different channel for different people. Sound interesting but he feel lazy to interact. just it is not a right time, siri has experience his from past mistake, when he had to force him-self. He turned off .

Still two hours to go, it will reach around 2.0 clock or 2.30, one of the employee from the office will come to pick him up, he knows half an hour late does not matter in western railway, so nothing to shame. last few hour, seems more longer than rest of the trip. when usually we get restless, but he seems fine and relax, no stretch, he is in process of cleanings, a long preparation for new place, new life. Actually this time, no big plan, rest of his life he has been excited by big plan, big desire- but this time bit different, free from all the illusion and see, life is still beautiful - actually people say in age of 35 people start real life, Now it is the time for. Rest of his life never been sure, confuse in duality, its lack of knowledge thats makes one blind, unsure to see the things clearly, somewhere, siri has regret took so long to see the things clear. Absorbing enough before come up any conclusion and thats took him till 35. Being resourceful, before rest of life has began. He has seen, a baby to born, grown up- gets married & gets her own baby, almost 3 generation live cast, he remember when Sachin Tendulkar start playing 1st international cricket match in his career at his age 16, just last year he has retired from cricket, end of another legendary empire, the world is getting older.

Train has arrived, feet on the ground, a transaction in different air, in different pressure. This the last stop, in western railway, no more station after that, (only salt & salt, it is the biggest salted desert in the earth) end of the civilization, beginning of new territory. This pieces of land is one of them, where, 1st human civilization took place in the world, the 'Indus valley civilization, quite contrast atmosphere today we see than back to 2500 BC, where to end where to start in a loop. Coincidentally, most of the archeological sites had been left out, in abandon places some where in the desert, as like in Atacama and Arizona, today where we see fertile land, once it was desert, geographical transmission, over the thousand year, a river slowly slowly change its track and turn into other way around. A complete alchemy. Geography book from school days, was full of imagination, basalt, granite rocks, sand stone, hot spring, river besine , tectonic movement- all are alike still human character- they are huge, giant & primitive, full of fear & ruthless - no mercy, its heard to explain their presences, so arbitrary and strong. Sri navigate there is something beyond what we see, but its not about ghost, supernatural, it is something grown with us over the period of time, mutually they do exist of \*being . Some how it was remain unspoken. \*Upanishadh, talked about \*brambha, it is not merely of particle, rather it has own autonomy to in act. Its belongs in between some where- its makes really makes boring to not think beyond particles, there ought be something more to live the rest of life . His job in archeologist deals with old object, free window for imagination goes through a proper scientific process. It dose mean ethnic objects are placed in the museum cage. Actually it is more open to live with present time & location - It is more than we see as mere traditional object, that representation only a cast, race or a community, rather it is open to access as an individual elements ( line , color, form) in all time all space universally. A simple terra-cotta toy is not a ancient animal rather its also evokes many things with its immediate other correlational element. For instance a white hat with circular fence, the cap usually used by cricketer during their match in Caribbean island, a archeologist in a excavating in site wearing similar white cap in middle of the no where. so a cricket cap, wear by archeologist, on the other hand cricket site & excavation site -in a arbitrary relation. but things is not only about archeology or its museums, its matter of others on going phenomenology, means other project, movement going on at the same time same geographical place. Here, discipline of archeology is helping to open up possibilities to explore the local landscape in both historically progression & evolution in the present time, where local community - natural resources, get incorporated by state policies. generally, when a civilization grow up, its slowly open up a possibilities base on the resources element scattered around, via space, place, via river, mountain, via desert via sea, there is also no man land, restricted for human accessing in the territory in security matter. I am talking about these different patches of landscape with different texture, grains, hue has manifested for different act. Today when have third vision through google earth, Some where its produced a sense of resistance to our vision, staying away from gravity. where google earth produce aesthetics of circuit board consisted with several events of thermal power station- airport- uranium mine, Museum, army camp, water reserver, bridge, high way etc etc.

That morning, when the Euro-Asia plate had been arrived at the shores of the Arabian sea, the land was fully disrupted, however, gradually that belt settled down and formed very differently in terms behavior of people, food , costume, ritual. Local nomadic tribes had settled their habitations under uncertain atmospheric conditions on the oldest land on \*Gondwana. Today what we see that does have not any similarities how it was before. This land has gone through tremendous changes in last 2000 years, it is one of most notorious land in the world. Sedicim activity, earth quack is mundane phenomena over here, it was 1850 BC when the plate felt earth quack, water from the Arabian sea entered into and stay back for forever. Over one earth quack, had been erased almost all vegetation. The ecological disaster significantly had changed local life form & pattern significantly. Once this place use to be Dinosaur with Shabhanas grass, still some places has left as fragmented with wild buffaloes. There was a myth around a lake, in 850 bc, when local area was going through crisis of fresh drinking water, another earth quack has come, create the lake water into sweet water in the over night, people know this as Alha dam, anyway someone had to do it to maintain local species and Alha did it . Natural calamity, religious & superstitious are historical consequences -Nature is religious via -versa, the cosmic force is inevitable.

After that many time has passed, the land was slowly settling down, there were no major, earth-quack has happened in last one & half century, now this place known as kutch, means turtle. this place well known for desert turtle, which by coincidentally refer to the myth, when earth was on the back of turtle in unstable condition. That might refer very much to the local history. The piece of land never part of India before, because of tectonic movement slowly moving to up and become part of the land maintain a special characteristic compare to rest of area. There were two unusual female in the railway station siri has seen, who are more than 6 ft high with big shoulder & big eye, they are very few left from ancient sindh community, very familiar quest, traveling back in 2500 BC. reminds him the half bast figured had found in the indus valley sites, strange! how this possible when so may time has passed, so many changes has happened but there are certain things remain unchanged, un touched. May be we never been modern, from a distance siri made a great salute to them with lot of respect and dignity to the last human from the age.

A geography location gets divided in to places, by lane number, pin number, area , post office, district, state - finally a nation. lineage local to global - in to out , a highway goes through town - suburb, water, mountain, plain, desert, forest, wet land - dry land- world connecting by 'linear projects' \* where lines of highway, electric cable, telecommunication, railway are tiding the world across and divide them into small sections, departments. Similarly, examining a plot structure combination of these different lines made the space into town, suburb, markets, municipal corporation, police station, hospital, archeological site, museum, water pump, park, judicial custody, and university, laboratory, schools, colleges. A society has formed, it has potentially equipped to be functions with in a small community. When a community act sense of totalitarian, choreographed by different different institutional felicities and performing through out every channel of it, which all are in a cybernetic relation, one get affected by other in the circuit board . I think it would be interesting to see how they are functioned , operate, overlaps by small small thread - the energy flow through these threads and get connected. There is need & supply, make the movement. There are in a process of mimetic, one refer to another by signal and signature. Signatures\*\* are exist into its chemical bond. Structure, molecule which has further coded by different factors, as such one factor do influence, inspire by others factor. In process of Mimesis, its does not represent to any event, its simply a happen to fall by its internal structural affection, for instance a factor of a particular plants is responsible to resolve the stone, is in the kidney. Similarly in a society, in a family, in a individual, in a stone, in a horse, in a state, in a nation, in a plane, or in a universe, in such all micro-macroton events are signature by countless codes. which are only way possible to get access by production of knowledge. But it is usually ended up rejected, discharged and dismissed. This has caused a lot of lots, forgotten denied, disparaged, derided bodies of knowledge. Perhaps resources to a prosperous society like in Renaissance period able to de-code and come up new discovery.
